York Central

by

Rob Auld CEng FICE

Construction Director, McLaren Property, Living, and Regeneration

York Central is one of the largest, and most exciting, city centre regeneration schemes in the UK.

Comprising 45 hectares of land directly linked to the city's railway station and National Railway Museum, it is a project of world-class ambition, which is on track to deliver a brand-new city quarter for York featuring more than 2,500 brand new homes and over 1 million sq. ft of commercial and retail space.

And it's here that a vibrant and distinctive mix of residential neighbourhoods, a high-quality commercial core, cultural spaces, and extensive parkland and public realm will come together to create a brand-new place like no other, in the heart of one of the UK's most historic and desirable cities.

York Central is being developed by a joint venture partnership between McLaren Property, Living, and Regeneration, and Arlington Real Estate, on behalf of majority landowners Homes England and Network Rail.

Rob Auld is the Construction Director for McLaren Property, Living, and Regeneration, and is responsible for the delivery of this fantastic development. His remit covers: the coordination of design, procurement of the projects, delivery of the construction phases and the establishment of the operational elements, of this market leading regeneration of such an important area of a great historic city.

Rob Auld

Please note, this lecture will be a live talk in Tempest Anderson Hall, Museum Street, Museum Gardens, York, YO1.

The talk is being organised jointly by the York Society of Engineers and the Yorkshire Philosophical Society.

The **York Society of Engineers** welcomes applications for membership from those engaged or interested in Engineering. Membership brings several benefits; please search “York Society of Engineers” on your browser, or visit our website directly at <https://www.yorksocietyofengineers.org> for more details and an application form.
